**PARTNERSHIP AND INTEGRATION PROCESSES IN SUPPLY CHAIN  
IN ASPECT OF THE TRANSACTION COSTS THEORY**

Execution of transaction joins with realization of activities, which engage partners in supply chain connected with delivery and with emotion of rights of property to goods material or services being her object. These activities can be research of partner, contact linking, negotiation, realization of transaction control etc. Every from these of activities will demand costs, which defined are as transactional costs. Transaction costs are not so connected from producing of object of transaction, but with process of initiation and removals transaction.

Transaction costs together with other costs create value of transaction object. From here also important is identifying and analyzing of cohesion between their variable level and definite factors.

In paper to analysis will become surrendered dependence between schedule of transaction costs and more and more strongly being developed in last year's in supply chain partnership and integration.
