LOGISTIC NET CONFIGURATION AND ECONOMIC DEVELOPMENT

Current present logistics management is configuration of logistic net. Aims of net configuration are: minimalizing of logistic costs, maximalization of level of customer service and profit in the supply chain. Necessary condition of configuration modeling is data base. To such given is numbered: list of product definite line of production, size and structure of supply every from products in place of customers location, location of raw materials sources, place of storing and place of sale. Besides: transportation costs, transport rates, store costs and rates of payments for areas magazine, supply costs and production costs. A configuration logistic net brings to marking of lowest location costs.
