

THE MEASUREMENT METHODS OF FINANCE PHENOMENA AND PROCESSES

Summary

The science of finances is a particular one among economic sciences; from a certain point of view the most interesting, the most important and at the same time, the most difficult. Though it is not without accident that philosophy, mathematics, physics also aspire to the role of „queen of sciences”, it is just economics that is considered „queen” among social sciences, and that not only by economists; the science of finances, on the other hand, is considered „queen” among economic sciences not only by financial experts. The considerations contained in the paper are a small contribution in the matter of finance methodology, especially in the area of the measurement methods of finance phenomena and processes.
