**KSZTAŁTOWANIE RELACJI MAKROEKONOMICZNYCH SEKTORA TRANSPORTU
W POLSCE W OKRESIE TRANSFORMACJI**

**The forming the macroeconomic relations of the transport sector in poland in the
transformation period**

In the paper an attempt of the characteristic of changes which took place in Poland in the transformation period has been undertaken. The detailed statistical analysis has been conducted concerning the forming of: the income from service activity in the relation to GDP, the size of the employment in the relation to overall employment in the national economy and average monthly payment to the payment in the national economy.

The base for this analysis was the present and characterized the overall changes which took place in transport sector. The changes in the market structure, transport infrastructure and sizes of the passengers and loads carriages have been characterized.
