LOGISTIC CENTERS IN THE DEVELOPMENT OF THE REGIONS

Summary

Transport availability of the Silesian voivodeship in the aspect of infrastructure of individual transport branches has been analysed and the level of development of the regional economic infrastructure has been characterized.

There is a positive feedback between these elements. Well developed transport and economic infrastructure create favourable conditions for locating logistic centres in such regions. The Silesian Logistic Centre S.A. has been presented as an example of the range of activities of such an economic unit.
