TRANSPORT ACCESSIBILITY OF SZCZECIN PORT

Summary

Port of Szczecin is an important junction on CETC transport corridor. However, large and complex investments are required to improve its accessibility. Although in recent years some - relatively minor - works on road connections had been finished, much remains to be done. With EU funding, massive projects are planned on Szczecin-Świnoujście river passage and railway tracks to the south. However, if the throughput of the routes is to reach desirable levels, much more funding will be needed, as well as cooperation of government and business bodies, some of which had not shown prior interest in developing transport routes of Szczecin and its port.
