THE DEVELOPMENT OF THE TRANSPORTATION NETWORK AS AN INSTRUMENT FOR THE IMPROVEMENT OF SPACE ACCESSIBILITY

Summary

The paper presents the practical aspects of the notion of space accessibility being a subject matter for the Cohesion Policy of the EU as well as the transportation policy in both local and pan-EU scales. The improvement of the space accessibility requires taking up the activities related to the modernisation and extension of the transportation infrastructure. The authors have pointed out the strategic importance of the public sector capital for the processes of transportation infrastructure development. Also the need for improving the system of acquiring the EU funds both on the regional and local level has been stressed.
