SPATIAL DIVERSITY OF TOURIST ATTRACTIVENESS
VOIVODESHIPS IN POLAND IN 2008

Summary

A survey of spatial diversity of tourist attractiveness according to voivodeships (provinces) in Poland was conducted in 2008. A set of diagnostic variables characteristic of links with various branches of social and economic life has been selected. The analysis has been carried using taxonomic growth test. The distinction of measured objects has been made on the basis of synthetic measures and four typological groups including objects with similar level of development of the tested phenomenon were separated.
