

INNOVATION IN LNG SUPPLY CHAINS

Summary

Increase in natural gas consumption all over the world is a cause of intensive interest of Liquefied Natural Gas. Companies belong to LNG supply chains implement many technological innovations, bring new solutions in transport, LNG production plants and receiving terminals. Apart from dynamic development on LNG market, on the world appear also others natural gas products such as CNG. Technology development creates new possibilities on the natural gas market. Although natural gas is limited resource and in years its resources in fields will disappear, nowadays there are researches in progress on gaining natural gas from gas (methane) hydrates, which amount has been not evaluated yet. Perspectives of LNG market supply side development give many countries including Poland possibility of join to LNG receivers and of diversification deliveries of this resource.
