INNOVATIVE METHODS OF THE EUROPEAN ATM

Summary

In the article were introduced innovative methods of the European ATM. Due to increasing air traffic and limited air space it was necessary to elaborate the conception of the rearrangement of air traffic.

The main goal of the program SESAR is to coordinate the searchingly-developmental actions undertaken until now in UE - including neighbour countries of UE - focusing on development of the new generation ATM system, which has to assure the safety and the effectiveness of air transportation for the next 30 years.
