

# **SELECTED PROBLEMS OF EXPLOITING ONTOLOGIES IN INFORMATION SYSTEMS OF GEOGRAPHICALLY DISPERSED ORGANIZATIONS**

## **Summary**

Globalization often drives enterprises to run their businesses in geographically dispersed environments. The problem of geographic dispersion often causes negative side effects on communication processes. Semantic technology based on ontologies is considered to be the very promising challenge in the area of improving communication. The aim of this paper is to present selected problems occurring while using ontologies, that impede proliferation of semantic technologies among business organizations.
