

**THE AUDIT OF THE DEVELOPMENT OF INFORMATION SOCIETY
COMMUNICATION WITH THE USE OF SOCIAL NETWORK
ANALYSIS (SNA)**

Summary

Because of the fact that the man as the individual focused on the area of common entity constitutes the basis of social affiliation (district, city, voivodship, country, continent, gender, preferences, inclination etc.) creating societies has the possibility of building information society through the development of communication technology. The article presents social network analysis as a tool of the audit of the development of information society communication.
