

## **INFORMATION AND ITS VALUE IN MOBILE INTEGRATED INFORMATION SYSTEMS**

### **Summary**

In the current Information Era access to quality information characterised by appropriate levels of usefulness and short search time becomes an extremely important criterion in the competition not only between companies but also between countries. The first part of the article discusses the role of information, and salient features of information in the mobile integrated information systems. The following part is a summary of the economic aspect of the information systems with reference to infonomics and economics of information.
