

INFORMATION SOCIETIES IN BALTIC SEA REGION Summary

In the article the author presents the information societies in the Baltic Sea Region in the innovation activity context. The observation of the changes in the countries of the Baltic Sea Region can be seen as the feedback between economic innovation and information society. In countries and regions with high potential for innovation the development of information society can be clearly seen. Where production of innovation is at a low level the society has the low standard of the Information Society as well.
