

## **THE CURRENT STATE AND THE PERSPECTIVES OF THE DEVELOPMENT OF THE INFORMATION SOCIETY IN POLAND**

### **Summary**

The structure of the civilization of the knowledge and the information society in highly developed countries became the necessity at present due to growing ecological barriers of the social-economic development, disadvantageous demographic changes and dynamically progressing process of the globalization.

The author indicates the problems associated with the structure of the information society in Poland. There are the problems deserving the particular attention: the insufficient development of the IT infrastructure including the broadband Internet and low awareness within the scope of the safety of the networking. These issues, together with the growth of an interest in the network services, can bring more and more serious consequences in the form of loss of private data or financial losses.
