

THE CLASSIFICATION OF POLISH PROVINCE DUE TO DEGREE OF USE OF THE ICT IN ENTERPRISES

Summary

This article aims to assess the use of the ICT in Polish enterprises. This assessment was carried out by the province and covered the years 2009-2010. Such an approach helped to make the classification of territorial units taking under consideration the level of the use of the informative technologies by businesses located there. To analyze the results there were used multivariate comparative methods such as linear order methods. This comprehensive approach allowed to establish a hierarchy of regions due to the degree of the ICT usage in enterprises.
