

THE PERSPECTIVES OF DEVELOPMENT OF TELEINFORMATIC TOOLS FOR SMALL TRANSPORT COMPANIES SERVICING

Summary

The short analysis of current situation in the field of informatization of transport companies was presented. It was noticed that large gaps exist in practical using of teleinformatic systems as the excellent solutions created for huge corporation are too sophisticated and over-dimensioned for small transport companies. Possibilities of the Java 2 Enterprise Edition Technology and the universal market hardware tools for informatization of small transport companies were described.
