E-BUSINESS - ESSENCE AND SCOPE Summary

E-business includes all the problems concerning purchasing and selling in the network. It links to: e-commerce, e-enterprise, e-economy, e-society, and even e-government, e-banking or e-learning. The essence of e-business is that all the transactions are on-line. The government's reports show that the level of electronic services in Poland, both in public and private sectors, differ from the indicators in European Union. There is a necessity to stimulate the sector and e-services through an increase of society awareness and building social confidence to electronic services. Despite the fact of being far from the indicators of EU, e-business in Poland expands in the fast pace, especially in such sectors like: telecommunications, transport and post.
